## **Tutorial - 1(D)** Applications of Definite Integral

- Volume by slicing method:
- 1. Find the volume of a solid ball of radius a using slicing method.
- 2. Find the volume of a cone with height 4 c.m. using by slicing method.
- 3. Using slicing method, find the volume of solid obtaining by rotating about the x-axis the region under the curve  $y = \sqrt{2x}$  from 0 to 1.
- <u>Volume by Rotation</u>:
- 4. The Region between the cure  $y = \sqrt{x}$ ,  $0 \le x \le 4$  and x-axis is revolved about the x-axis to generate a solid. Find its volume.
- 5. Find the volume generated by revolving the area bounded but he parabola  $y^2 = 8x$  and its latus rectum about *y*-axis.
- 6. Find the volume generated by revolving the area bounded by  $2x = x^2$ , x = 4, y = 0 about x-axis.
- 7. Find the volume of solid generated by revolving the cordial  $\pi = a(1 + \cos \theta)$  about the initial line.
- 8. Find the volume generated by revolving the arc bounded by the parabola  $y^2 = 4ax$ , a > 0 and latus rectum about latus rectum.
  - Volume by Cylindrical Shells.
- 9. Find the volume generated by revolving the area bounded by  $2y = x^2$ , x = 4, y = 0 about y-axis
- 10. Find the volume of solid generated by rotating about y-axis and the region bounded by the curve y = x and  $y = x^2$ .

- 11. Using cylindrical shells, find the volume of the solid obtained by rotating about the x-axis the region under the curve  $y = \sqrt{x}$  from o to 1.
- 12. Find the volume of the solid obtaining about the line y=-1 the region bounded by the curves  $y=x^2$  and  $x=y^2$ .
